

Python Programming

Q1) Count Lines in a File

Problem Statement:

Write a program which accepts a file name from the user and counts how many **lines** are present in the file.

Input:

Demo.txt

Expected Output:

Total number of lines in Demo.txt.

Q2) Count Words in a File

Problem Statement:

Write a program which accepts a file name from the user and counts the total number of **words** in that file.

Input:

Demo.txt

Expected Output:

Total number of words in Demo.txt.

Q3) Display File Line by Line

Problem Statement:

Write a program which accepts a file name from the user and displays the contents of the file **line by line** on the screen.

Input:

Demo.txt

Expected Output:

Display each line of Demo.txt one by one.

Q4) Copy File Contents into Another File

Problem Statement:

Write a program which accepts two file names from the user.

- First file is an **existing file**
- Second file is a **new file**

Copy all contents from the first file into the second file.

Input:

ABC.txt Demo.txt

Expected Output:

Contents of ABC.txt copied into Demo.txt.

Q5) Search a Word in File

Problem Statement:

Write a program which accepts a file name and a word from the user and checks whether that word is **present in the file or not**.

Input:

Demo.txt Marvellous

Expected Output:

Display whether the word Marvellous is found in Demo.txt or not.
