

Python Programming Assignment

1. Write a lambda function using **map()** which accepts a **list of numbers** and returns a **list of squares** of each number.
2. Write a lambda function using **filter()** which accepts a **list of numbers** and returns a **list of even numbers**.
3. Write a lambda function using **filter()** which accepts a **list of numbers** and returns a **list of odd numbers**.
4. Write a lambda function using **reduce()** which accepts a **list of numbers** and returns the **addition of all elements**.
5. Write a lambda function using **reduce()** which accepts a **list of numbers** and returns the **maximum element**.
6. Write a lambda function using **reduce()** which accepts a **list of numbers** and returns the **minimum element**.
7. Write a lambda function using **filter()** which accepts a **list of strings** and returns a **list of strings** having length greater than 5.
8. Write a lambda function using **filter()** which accepts a **list of numbers** and returns a **list of numbers** divisible by both 3 and 5.
9. Write a lambda function using **reduce()** which accepts a **list of numbers** and returns the **product of all elements**.
10. Write a lambda function using **filter()** which accepts a **list of numbers** and returns the **count of even numbers**.
